

DelDOT - Development Coordination EMAIL-BLAST

Subject:

Pavement Core Request

Effective Date:

May 31, 2018

Notice

To streamline the pavement design process, effective May 31, 2018, DelDOT's Development Coordination Section will no longer be facilitating Pavement Core Requests for Development Projects. A Pavement Core/Design Request form has been developed for all requests. The form is located on the Development Coordination website under the Form dropdown. Please send all requests, including the Form and locational information directly to the Pavement Design Section at DOT_PavementCores@state.de.us and please cc Subdivision@state.de.us.

This process change will enable the Developer's Engineer to submit core requests at any time during the design process. The Department encourages the applicant to request cores early in the process. This will ensure that the pavement design submitted for review will be the final design and will not result in additional reviews. Please be sure to include the core information on your plans when you submit through the PDCA. This will ensure that we are all reviewing and commenting on the most up to date information. If cores have not been requested, or results are not yet available and you submit through the PDCA, please ensure that the pavement section shown complies with the Development Coordination Manual.
