

CONTENTS

1.	What we did and why we did it	1
2.	Project area historical background	9
3.	Phase I Fieldwork narrative	18
4.	A possibility of a cemetery	25
5.	The First Phase II Project	32
6.	Second Alignment Phase II Fieldwork.....	37
7.	Looking at the artifacts	41
8.	Soils tell of site history	45
9.	Pit features and related mysteries	55
10.	Conclusions and recommendations.....	65
	Excavation Register.....	69
	Plants as site indicators (especially cemetery sites).....	98
	References.....	100

FIGURES

1.	Map of Delaware during the Paleo period	2
2.	Ridge behind Cedar Chase apartments	6
3.	Modern map	7
4.	1829 plot redrawn.....	9
5.	1918 John C. Hopkins survey.....	10
6.	Enlarged detail of the 1868 Beers Atlas.....	11
7.	Baker, later Learned, property boundaries.....	12
8.	Postwar map of the project vicinity	13
9.	Zimmerman to Learned conveyance 1954.....	14
10.	Learned to Zimmerman conveyance 1954.....	15
11.	Assembly of the Trailer Village property.....	16
12.	Parcels included in 1987 property exchanges.....	17
13.	First four tests.....	18
14.	Test 2 profile	19
15.	Test 1 profile	19
16.	Network of lettered triangulation points	20
17.	Sketch map of the project area	21
18.	First test pit.....	22
19.	Cara Blume discusses the pottery-rich unit 10.....	23
20.	White Marsh Branch, viewed from the project work area	24
21.	Before excavation, the area behind the volleyball court	25
22.	Under the eye of visiting DelDOT staff.....	27
23.	Backhoe-equipped tractor.....	27
24.	Generalized profile of stripped area.....	28
25.	Diagram of stripped area	28
26.	Machine cut trench after it was backfilled	29
27.	After the machine had removed fill and topsoil.....	30
28.	A hand dug trench into one of the linear features	30
29.	Outline of a sewage system drainfield.....	30
30.	Sketch map at the end of the first Phase II study.....	31
31.	Dan Griffith's Wesley College class on site	32
32.	Wesley College students sift the dirt.....	33

33.	First of several deep pits	33
34.	Profile of Unit 14	33
35.	Along the fence line, units yielded rock-filled features	34
36.	Units on the White Marsh Branch side of the peninsula	34
37.	John Hoffman opens a unit	34
38.	There were two features in Unit 26	35
39.	Cara Blume discusses the site with visitors from Canada	35
40.	Unit 28, the lower pit feature	35
41.	Particularly large rocks in Unit 29.....	36
42.	Profile of the unit shown in figure 40	36
43.	One section of the rim of the "pot drop" vessel	37
44.	Field sketch map of the second batch of Phase II tests.....	38
45.	Judy Rosentel and Dawn Corbett open a shovel test pit.....	39
46.	Part of the "pot drop" <i>in situ</i>	39
47.	The crew puzzles over the profile of the large "eastern" pit.....	39
48.	The dropped pot, in "flattened" or diagrammatic format.....	40
49.	Contracting stem point from Unit 59, level 2b	41
50.	Broken heat-treated jasper stemmed point from Unit 7	41
51.	Thumbnail srafer, Unit 63, level 1	42
52.	Stone artifacts from the Beech Ridge site	43
53.	Sherd of Townsend pottery.....	44
54.	Composite profile of the Foss samples.....	45
55.	Correlation of soil profile sampling locations with site grid.....	47
56.	Dr. John Foss removes a sample from his auger.....	48
57.	Map of phosphorous in the site soils	49
58.	Map of potassium in the site soils	50
59.	Map of calcium in the site soils.....	51
60.	Map of iron in the site soils.....	52
61.	Early in second Phase II campaign we encountered a large pit...55	
62.	Western pit was first opened in May	56
63.	Layout of the eastern pit.....	57
64.	Profile of the large pit, unit 54.....	58
65.	Plan of the western pit.....	59
66.	Outlying test around western pit.....	61
67.	Quantities of elements in levels of the east pit	64
68.	Topographic map based upon detailed surveys	68
