

APPENDIX I
ARTIFACT INVENTORY

DAIRY QUEEN HISTORIC TOTAL COUNTS

CERAMIC	Final Phase II
Redware	126
Creamware	6
Pearlware	24
Whiteware	38
Ironstone	9
Yellowware	5
Stoneware	2
Salt-glazed Stoneware	4
Tin-glazed Earthenware	3
Porcelain	4
Pipestem Frag.	5
GLASS	
Curved Clear	143
Curved Colored	138
Window	103
Bottle	2
Table	3
ARCHITECTURAL	
Brick Frag.	23
Nails	47
Fence Staples	5
Building Materials	227
Screws	4
Misc. Fe. Metal	18
Misc. Non-Fe. Metal	6
PERSONAL	
Leather	19
Belt Buckle	1
Button	1
MISCELLANEOUS	
Bone	6
Gunflint	1
Seed	1
Plastic/Vinyl	1

CHT - chert	WT - weight
QTT - quartzite	

APPENDIX II
NOTES ON SITE NUMBERS

NOTES ON SITE NUMBERS
(an example)

7NC-D-129(N-10895)

7NC-D-129

7NC-D-129 = State Site Number

- 7 = Numerical prefix identifying the state of Delaware.
- NC = New Castle County; K = Kent County
- D = Each county is divided into lettered divisions, letter D indicates the block in which the site is found in New Castle County, Delaware.
- 129 = The 129th site recorded in block D, New Castle County Delaware.

N-10895

N-10895 = Cultural Resource Survey Number

- N = New Castle County, Delaware; K = Kent County
- 10895 = The 10895th cultural resource inventoried in New Castle County. Each cultural resource number ties into the aerial photos and management files on repository with the Delaware Division of Historical and Cultural Affairs, Dover, Delaware and/or The Island Field Museum and Research Center, South Bowers, Delaware.

New Castle County-7NC

Kent County-7K

Sussex County-7S

APPENDIX III

GLOSSARY

GLOSSARY

- Aboriginal** - Prehistoric peoples in North America.
- Alluvium** - Deposits of gravel, sand, and soil which are transported by flowing water.
- Artifact** - Any object shaped or modified by man, or as a result of human activity.
- Archaeology** - The study of the people of the past through the recovery and analysis of the artifacts they left behind and their context.
- Assemblage** - The array of contemporary objects and associations found at an archaeological site.
- Auger** - A large tool for boring holes deep in the ground.
- Basecamp** - A prehistoric dwelling site for hunter-gatherers from which resource procurement forays are made.
- Bay/Basin Feature** - Also known as whale wallows, these shallow ponds, thought to have been formed during the end of the Pleistocene, represent a favored prehistoric settlement location.
- Biface** - A stone tool that has been flaked on both sides.
- Bifurcate** - The projectile point from the Archaic Period (6500 B.C.), it is a small point with a notched base.
- B. P.** - Years before present, which has been standardized at A.D. 1950.
- Cache** - A collection of artifacts and/or ecofacts which have been deliberately stored for future use.
- Cobble** - Frequent lithic tool resource for prehistoric peoples.
- Core** - A piece of stone from which other pieces of stone are flaked off to make artifacts.
- Cortex** - Weathered exterior of a piece of lithic material, may be either vein or water-worn cortex.
- Cryptocrystalline** - Indistinctly crystalline; having an indistinguishable crystalline structure (i.e. - chert and jasper).
- Culture** - The nonbiological mechanism of human adaptation.
- Debitage** - Waste material from the manufacture of stone tools.

Detritus - Particles of rock or other material worn or broken away from a mass, as by the action of water or glacial ice; any disintegrated material; debris.

Direct Percussion - Part of the lithic reduction process, a percussor is directly applied to the worked material with a sharp blow.

Discards - Stone tools which have been heavily resharpened and modified to be further utilized as tools.

Ecofact - The nonartifactual remains found in archaeological sites such as seeds, bones, and plant pollen.

Feature - Any soil disturbance or discoloration that reflects human activity or an artifact that, being too large to remove from a site, normally is recorded only; for example, house, storage pits, etc. can also be a very dense collection of artifacts: for example, a lithic chipping feature.

Flake - A piece of waste material from the manufacture of stone tools, caused by percussion or pressure applied to the object by an external agent (e.g. hammerstone, antler pressure flaker); flake itself may be further utilized as a tool (see "Debitage").

Historic - The time period after the appearance of written records. In the New World, this generally refers to the time period after the beginning of European settlement at approximately 1600 A.D.

Holocene - The latest division of the Quarternary period, which commenced around 12,000 B.P.

Indirect Percussion - In the lithic reduction process, a punch is held against the worked material and the punch is struck a sharp blow with a percussor.

Interface - A surface regarded as the common boundary of two bodies or spaces.

Lithic - Pertaining to or consisting of stone.

Loam - A loose soil composed of roughly equal parts of silt, clay and sand, especially a kind containing organic matter and of great fertility.

Locus - A defined archaeological site or testing location.

Macro-band Base Camp - For a hunter-gatherer society, an archaeological site one hectare or larger in area characterized by a wide variety of tool types, abundant ceramics, semi-subterranean house structures, storage pit

- features, and abundant debitage from tool manufacture and reduction.
- Micro-band** - A component of macro-band, perhaps one or two extended families, which periodically operates independently of the macro-band group.
- Physiographic Zone** - Regions or areas that are characterized by a particular geography, geology, and topography.
- Pleistocene** - A division of the geologic Quarternary Period, which began around 2.3 to 3 million years ago and is associated with rapid hominid evolution from Australopithecinae to Homo sapiens sapiens.
- Plowzone** - In a plowed field, the upper layer of organic soil which is continually reworked by the plow. In the Middle Atlantic region this is about 8-12 inches.
- Posthole** - A hole dug in the ground into which a post is placed.
- Postmold** - The organic stain in the ground which is left by a decayed wooden post. A postmold stain may occur inside of a posthole stain on an archaeological site.
- Prehistoric** - The time period before the appearance of written records. In the New World this generally refers to indigenous, pre-Contact societies.
- Projectile Point** - Strictly speaking, a biface attached to the head of an airborne item of weaponry, like an arrow or a thrown dart; frequently used indiscriminately when referring to any biface.
- Ranked Society** - A society in which there is unequal access to the higher status categories; many people who are qualified for high status positions are unable to achieve them.
- Rejects** - Stone tools which have been thrown away due to manufacturing or material flaws.
- Soil Horizon** - Soils are divided in 3 horizons, which reflect different kinds of chemical and physical processes that have resulted from changing climatic conditions.
- Stratigraphy** - The examination of the soil layering on an archaeological site; the characteristics of each individual stratum and its relationship to others in the sequence is critical to understanding the temporal and spatial characteristics of the site.
- Strata** - The various layers of human or geological origin which comprise archaeological sites.
- Subsurface** - Below the surface, not visible from the surface.

Transect Sampling - A means of archaeological research design in which the sampling element is a square or rectangular grid.

Uniface - A stone tool that has been flaked only on one side.
