

US 9 and SR 5 Intersection Improvements

Project Scope

The intersection of US 9 and SR 5 in Harbeson currently has an intersection configuration that consists of one lane on US 9 westbound and one lane on SR 5 northbound. The US 9 eastbound and SR 5 southbound approaches share a through and left-turn lane and have right-turn lanes. The project provides much needed safety improvements consisting of the installation of exclusive left-turn lanes on each of the approaches as well as shared through and right-turn lanes. Additional improvements include the replacement of two bridge culverts, drainage features, new curbing and sidewalk.

Project Justification

- This location has been identified as a site needing safety improvements by the 2009 Hazard Elimination Program.
- Between January of 2005 and February 2015 the intersection has seen:
 - 110 Total Reported Crashes
 - 51% of the Reported Crashes were rear-end crashes

Project Schedule

- **Right-of-Way Acquisition:** scheduled to begin October 2015
- **Construction:** scheduled to begin Summer 2017

Estimated Construction Cost

- \$3,500,000
