

HIGHWAY STATISTICS

2010 Delaware State Parks and Forest

The Division of Parks & Recreation operates and maintains 16 state parks and related preserves and greenways throughout Delaware, totaling more than 25,000 acres and serving 4.8 million visitors annually. The State's parkland protection programs, as well as the State's [Greenways and Trails Program](#), are administered by the Division. The Division is also responsible for providing recreational opportunities, educational and interpretive programs for the public. Other responsibilities include acquiring and developing recreational lands and facilities, providing for the protection of natural areas, and overseeing and planning for statewide recreational needs.

The inventory for the State Parks road system consists of a total of 43.16 miles. The Division is in the process of transitioning our roadway inventory into a GIS (Geographic Information Systems) format, which will be made available in late 2012. At a later date, traffic counters will be installed at the main entrances to the parks which will provide more accurate data on the number of vehicles using our roadways.
