GENERAL NOTES

1. MAINTENANCE OF TRAFFIC, STREET CLOSURES AND LANE DELISTRATIONS SHALL COMPLY WITH TYPICAL APPLICATION 3.30, 3.10, AND 3.17 OF THE DELAWARE NOTES.

2. AMERICAN TRAFFIC SAFETY SERVICES ASSOCIATION (ATSA) CERTIFIED TRAFFIC CONTROL SUPERVISION REQUIREMENTS FOR THIS PROJECT.

3. THE CONTRACTOR SHALL HAVE AN ATSA SUPERVISOR DESIGNATED TO THIS PROJECT. THE CONTRACTOR'S GENERAL SUPERVISOR DESIGNATED TO THIS PROJECT OR ANOTHER ATSA CERTIFIED MEMBER OF THE CONTRACTOR'S PROJECT STAFF MAY BE THE ATSA SUPERVISOR DESIGNATED TO THIS PROJECT.
GENERAL EROSION AND SEDIMENT CONTROL (E&S) NOTES

1. The Stormwater Pollution Prevention Plan (SWPPP) has been approved by DelDOT's Stormwater Engineer under DelDOT's delegated authority. Plan approval is valid for a period of five years, starting on the date of the SwPPP's initial submission. Any changes to the SWPPP must be approved by DelDOT.

2. All construction shall remain covered and seeded, including areas within the limits of construction where a temporary deposit of disturbed soil is being received for future use. A soil stockpile shall be located a minimum of 50 feet from a storm drain system or stream channel. Wherever practical, 10 feet is the distance to be maintained from a storm drain system or stream channel. Use of a soil stockpile less than 50 feet from a storm drain system or stream channel is not to be used for the storage of excavated soil until all construction is complete. Use of a soil stockpile less than 50 feet from a storm drain system or stream channel is not to be used for the storage of excavated soil. All soil stockpiles shall be covered with mulch as directed by the Engineer. Mulch shall be installed within seven (7) calendar days of construction initiation. Any sediments or sediment-laden discharge must be diverted to a sediment trap or other appropriate means approved by the Engineer.

3. All temporary concentrated flow areas (including channels) shall be stabilized with mulch as directed by the Engineer. Installation of temporary sediment control devices shall not proceed until temporary or permanent stabilization of the first 20 acre section is accomplished as approved by the Engineer.

4. For any permanent stormwater management facility, follow that facility's sequence of construction as noted on the stormwater management sheet(s).

5. No more than 20 acres may be disturbed at any time. Erosion and sediment control devices shall be installed as required by the Engineer.

6. Maintain positive drainage in existing and proposed drainage systems by executing construction cleaning existing drainage systems, and proper design of segments throughout the duration of the project.
