

STATE OF DELAWARE

DEPARTMENT OF TRANSPORTATION

800 BAY ROAD
P.O. BOX 778
DOVER, DELAWARE 19903

NICOLE MAJESKI SECRETARY

May 2, 2023

Revised: October 24, 2024

Mr. Ted Williams, PE Landmark Science & Engineering 200 Continental Drive, Suite 400 Newark, Delaware 19713

Dear Mr. Williams:

The enclosed Revised Traffic Operational Analysis (TOA) review letter for the proposed Lincoln Center (Tax Parcel: 10-033.00-040) mixed-use development has been completed under the responsible charge of a registered professional engineer whose firm is authorized to work in the State of Delaware. They have found the TOA to conform to DelDOT's <u>Development Coordination Manual</u> and other accepted practices and procedures for such studies. DelDOT accepts this letter and concurs with the recommendations. The letter has been revised to reflect changes to the development's change in land use and access configuration. If you have any questions concerning this letter or the enclosed review letter, please contact me at <u>Annamaria.Furmato@delaware.gov</u>.

Sincerely,

Annamaria Furmato

TIS Group Project Engineer

RE: Agreement No. 1945F

> Project Number - T202369005 Traffic Impact Study Services Task 11-5A – Lincoln Center TOA

Dear Ms. Furmato:

Johnson, Mirmiran, and Thompson (JMT) has completed a review of the Traffic Operational Analysis (TOA) for the Lincoln Center development, which was prepared by Landmark Science & Engineering, dated April 2022, last revised September 2022. This review was assigned as Task Number 11-5A. The report is prepared in a manner generally consistent with DelDOT's Development Coordination Manual. This letter has been revised to reflect a change in the proposed land uses for the development and changes to the proposed site entrances.

Per Plan Note 13 on the subject site's Record Plan, with DelDOT's Letter of No Objection to Recordation (LONOR) dated May 3, 2019, a Traffic Impact Study (TIS) waiver was granted for the proposed development as it was located within and consistent with the US Route 40 Corridor Study. The TIS waiver was based in part on the execution of a Traffic Mitigation Agreement (TMA) as described in Plan Note 40 on the Record Plan. On April 24, 2012, the developer entered into the TMA, I.N.20120425-0022899, with DelDOT in which the developer committed to address traffic and transportation issues presented by the proposed development by using Traffic Demand Management (TDM) strategies to reduce vehicular traffic associated with the development.

It has been determined that since the TMA was executed, the effectiveness of the mitigation measures identified have become more difficult to quantify and that it may be beneficial to the developer and DelDOT to remove the note (Plan Note 40) and end the agreement. The purpose of this TOA is to provide support for removing the note and, thus, for the developer to be released from the TMA, by showing that the intersections that made it necessary no longer need the mitigation the agreement would have provided. As such, the TOA was conducted to identify any needed improvements and determine appropriate mitigation measures.

The September 2022 TOA evaluates the impacts of a proposed mixed-use development consisting of 508 units of mid-rise multi-family housing, a 230-room full-service hotel, a 10,000 square-foot daycare, 181,470 square feet of shopping center space, 10,000 square feet of high-turnover sitdown restaurant space, and 499,863 square feet of general office space in New Castle County, Delaware. The site is located on the east side of Delaware Route 7, approximately 550 feet south

of Newtown Road (New Castle Road 58). The subject property is on an approximately 56.05-acre parcel that is currently zoned as CR (Commercial Regional), and the developer does not plan to rezone the land. Two access points are proposed on Delaware Route 7: one full access opposite Freedom Road and another by way of a connection with E. Songsmith Drive.

A Final TOA review letter was issued on May 1, 2023 for the development proposed in the September 2022 TOA. Since the issuance of the May 1, 2023 Final TOA review letter, the proposed development has been updated to include 508 units of mid-rise multi-family housing, a 110-room hotel, a 10,000 square-foot daycare, 499,863 square feet of general office space, 196,862 square feet of shopping center space, and a 5,000 square foot high turn-over sit-down restaurant. Additionally, a rights-in only access is proposed along Delaware Route 7, approximately 500 feet north of Site Entrance A and a rights-out access is proposed along E. Songsmith Drive. Concept Plans depicting the previous and latest layouts are shown on Page 13.

The following table summarizes the land uses proposed in the September 2022 TOA and the updated proposed land uses.

T ' 1	\sim	T 1	TT	~ .	
Lincoln	Center	Land	Use	Comparison	
Lincom	CIIICI	Lana	000	Companion	

Land Use	September 2022 TOA	Updated Uses
Mid-Rise Multi-Family Housing (ITE – 221)	508 Units	508 Units
Hotel (ITE – 310)	230 Rooms	110 Rooms
Day Care Center (ITE – 565)	10,000 SF	10,000 SF
General Office (ITE – 710)	499,863 SF	499,863 SF
Shopping Center (ITE - 820)	181,470 SF	196,860 SF
High-Turnover Sit-Down Restaurant (ITE – 932)	10,000 SF	5,000 SF

The following table summarizes a trip generation comparison between the September 2022 TOA and the updated proposed development. The trip generation for the land uses included in the September 2022 TOA was performed according to <u>Trip Generation</u>, <u>10th Edition</u>: <u>An ITE Informational Report</u>, published by the Institute of Transportation Engineers (ITE). Since then, the <u>Trip Generation</u>, <u>11th Edition</u>: <u>An ITE Information Report</u>, was published by ITE. As such, the trip generation for the updated uses was performed according to the 11th Edition. Detailed lists of the trip generation from the September 2022 TOA and the updated proposed development are on Pages 16 and 17.

Lincoln Center Trip Generation Comparison Between TOA and ITE 11th Edition

Land Use	ADT	AM Peak Hour			PM Peak Hour		
Land Use	ADI	In	Out	Total	In	Out	Total
September 2022 TOA Total New Trips (ITE 10 th Edition)	20,605	676	308	984	463	787	1,250
Updated Uses Total New Trips (ITE 11 th Edition)	19,867	795	325	1,120	464	860	1,324
Difference Total New Trips	-738	+119	+17	+136	+1	+73	+74

An additional comparison is presented in the following table to depict the difference if the proposed trip generation of the land uses from the September 2022 TOA were developed based on ITE 11th Edition.

Lincoln Center Trip Generation Comparison Based on ITE 11th Edition

Land Use	ADT	AM Peak Hour			PM Peak Hour		
Land Use	ADI	In	Out	Total	In	Out	Total
September 2022 TOA Total New Trips (ITE 11 th Edition)	21,302	821	342	1,163	484	872	1,356
Updated Uses Total New Trips (ITE 11 th Edition)	19,867	795	325	1,120	464	860	1,324
Difference Total New Trips	-1,435	-26	-17	-43	-20	-12	-32

As depicted in the comparison table based on ITE 11th Edition, a decrease in trip generation is calculated between the land uses proposed in the September 2022 TOA and the updated land uses.

The development considered in the September 2022 TOA accounted for the following site accesses:

- Signalized full access along Delaware Route 7 opposite Freedom Road.
- Unsignalized full access along East Songsmith Drive.

The revised site plan for the Lincoln Center includes the following site accesses:

- Signalized full access along Delaware Route 7 opposite Freedom Road.
- Unsignalized full access along East Songsmith Drive.
- Rights-in only unsignalized access along Delaware Route 7, approximately 450 feet north of East Songsmith Drive.
- Rights-out only unsignalized access along East Songsmith Drive.

The September 2022 TOA did not include volume development or traffic analysis for the proposed unsignalized site entrance along East Songsmith Drive as that design was to be finalized during the Plan review process.

Relevant and On-Going Projects and Studies

DelDOT has relevant and on-going improvement projects within the study area. The *SR 1 Widening, Road A to US 40* (DelDOT Contract No. T202011001) project, which was originally part of the *SR1 Widening, SR273 to the Roth Bridge* project (DelDOT Contract No. T200511001), proposes to identify and prioritize cost-effective short, mid, and long-term transportation infrastructure improvements to reduce congestion, reduce travel times, and improve safety, all while minimizing environmental impacts. This project affects the Delaware Route 1 and Delaware Route 273 intersection as well as the Delaware Route 273 and Delaware Route 7 intersection, just north of the study area for the Lincoln Center TOA. This project is currently in the design and planning phase, with several public workshops already being held. At the January 2022 public workshop, a preferred alternative depicting a single point urban interchange (SPUI) at the Delaware Route 1 and Delaware Route 273 interchange was presented. Additionally, ramps from Delaware Route 1 are proposed to connect to the Delaware Route 7 and Newtown Road intersection. Construction dates have not yet been determined at this stage. More information regarding the project can be found at the following websites:

https://deldot.gov/projects/index.shtml?dc=details&projectNumber=T200511001; https://deldot.gov/projects/index.shtml?dc=details&projectNumber=T202011001.

The Route 40 Corridor Improvements Project was initiated by the Delaware Department of Transportation in partnership with New Castle County and WILMAPCO in September 1998 and created the community-supported 20-year transportation plan previously known as the Route 40 Corridor 20-Year Transportation Plan. The Plan addresses the conditions that are expected to result from projected growth in housing, employment, and traffic over 20 years. The Plan contains projects that address the projected transportation problems. An annual Corridor Monitoring and Triggering Report is generated by DelDOT, WILMAPCO, New Castle County, and DART to determine the need for further evaluation of transportation, safety, and transit improvements based on land development, traffic, corridor preservation, highway safety, transit service, and projects in the area. More information regarding the study can be found at the following website: https://deldot.gov/projects/index.shtml?dc=corridor&name=us-40

The US Route 40 intersection with Delaware Route 7 is reviewed as part of the Corridor Monitoring associated with the *Route 40 Corridor Improvements Project*. As a result of the monitoring, DelDOT has developed the *US 40 and SR 7 Intersection Improvements* project (DelDOT Contract No. T202304101), which aims to improve safety and operations through geometric improvements, with a potential for a grade-separated interchange. Per the *FY25 - FY30 Capital Transportation Program Spend Plan*, Preliminary Engineering is scheduled as part of Fiscal Year 2025 through Fiscal Year 2029. The construction funding has not been established.

Summary of Analysis Results

Based on our review of the Traffic Operational Analysis, we have the following comments and recommendations:

The following intersections exhibit level of service (LOS) deficiencies without the implementation of physical roadway and/or traffic control improvements. Additionally, the table below does not include any signalized intersections that exhibit LOS deficiencies which can be mitigated with signal timing optimization as the developer would not be recommended to implement any additional improvements at those intersections.

Intersection	LOS Deficie	ncies Occur	Case		
Intersection	AM	PM	Case		
Delaware Route 7 / Site		X	Case 2 – 2022 without Development		
Entrance A / Freedom Road	X X		Case 3 – 2022 with Development		

<u>Delaware Route 7 / Site Entrance A / Freedom Road See Table 2, Page 23 & Development Improvement #2 & 3</u>

The unsignalized Delaware Route 7/Site Entrance A/Freedom Road intersection exhibits LOS deficiencies along the eastbound Freedom Road approach during the PM peak hour under future conditions without the development (Case 2) and during all peak hours under future conditions with the development (Case 3). Additionally, the intersection exhibits LOS deficiencies along the westbound Site Entrance A approach during all peak hours under future conditions with the development (Case 3). During the weekday PM peak hour under future conditions without the development, the eastbound Freedom Road approach operates at LOS F with a delay of 54.1 seconds per vehicle. During the weekday PM peak hour under future conditions with the development, the eastbound Freedom Road and westbound Site Entrance approaches operate at LOS F with delays of over 1,000 seconds per vehicle.

Future analysis at this intersection was performed modeling the intersection as signalized. With a signal, the intersection would not exhibit LOS deficiencies with or without the proposed development (Case 2 and Case 3) under the weekday AM and PM peak hours. A Traffic Signal Justification Study (TSJS) prepared by Landmark Engineering dated July 2012 found that the projected volumes at the intersection would meet Warrants 1 (8-hour), 2 (4-hour) and 3 (peak hour). The July 2012 TSJS does not have a significant volume difference compared to volumes from Case 3 of the TOA. As such, the intersection would continue to meet the volume signal warrants and it is recommended that the developer construct one signalized access along Delaware Route 7 at the intersection with Site Entrance A and Freedom Road.

Development Improvements

Should New Castle County approve the proposed development, the following items should be incorporated into the site design and reflected on the record plan, unless a Design Deviation is requested and approved by the Department. All applicable agreements (i.e., letter agreements for off-site improvements and traffic signal agreements) should be executed prior to entrance plan approval for the proposed development. The following items should be implemented at the same time as site construction once all agency approvals and permits are secured and completed in accordance with DelDOT's Standards and Specifications.

- 1. The developer shall improve the State-maintained Roads on which they front (Delaware Route 7 and E. Songsmith Drive), within the limits of their frontage. The improvements shall include both directions of travel, regardless of whether the developer's lands are on one or both sides of the road. "Frontage" means the length along the state right-of-way of a single property tract where an entrance is proposed or required. If a single property tract has frontage along multiple roadways, any segment of roadway including an entrance shall be improved to meet DelDOT's Functional Classification criteria as found in Section 1.1 of the Development Coordination Manual and elsewhere therein, and/or improvements established in the Traffic Operational Analysis and/or Traffic Impact Study. "Secondary Frontage" means the length along the state right-of-way of a single property tract where no entrance is proposed or required. The segment of roadway may be upgraded by improving the pavement condition of the existing roadway width. The Pavement Management Section and Subdivision Section will determine the requirements to improve the pavement condition.
- 2. The developer should construct a signalized full access Site Entrance A on Delaware Route 7, at the intersection with Freedom Road. The access should be located directly across from the existing Freedom Road approach. The intersection should be consistent with the lane configurations shown in the table below. However, the lane configurations may be impacted through coordination with DelDOT Traffic.

Approach	Current	Configuration	Proposed Configuration				
Eastbound Freedom Road	One left turn lane and one right turn lane		One shared left turn/through lane and one right turn lane				
Westbound Site Entrance A	One shared left turn/through/right turn lane	Freedom Road Site Entrance A	One shared left turn/through lane and one right turn lane	RTL = 290' N Site Entrance A			
Northbound Delaware Route 7	One left turn lane, two through lanes, and one right turn lane		No change	RTL = 290'			
Southbound Delaware Route 7	One left turn lane, two through lanes, and one right turn lane		No change				

Based on DelDOT's *Development Coordination Manual* and the HCS analysis results, the recommended minimum storage lengths (excluding taper) of the separate left turn and right turn lanes along Delaware Route 7 are listed below. The calculated queue lengths from the HCS analysis can be accommodated within the recommended storage lengths.

Approach	Left Turn Lane	Right Turn Lane
Northbound Delaware Route 7	170 feet*	290 feet**
Southbound Delaware Route 7	320 feet*	290 feet**

^{*}Storage length matches the existing storage length per field conditions and should be maintained **Storage length does not match the existing storage length and requires lengthening

^{3.} The developer should enter into a traffic signal agreement with DelDOT for the intersection of Delaware Route 7/Freedom Road/Site Entrance A.

4. The developer should construct an unsignalized full access Site Entrance B on E. Songsmith Drive, approximately 800 feet east of the intersection with Delaware Route 7. The intersection should be consistent with the lane configurations shown in the table below.

Approach	Currei	nt Configuration	Proposed Configuration			
Eastbound E. Songsmith Drive	One through lane	↑	One left turn lane and one through lane	T N		
Westbound E. Songsmith Drive	One through lane	N E. Songsmith	One through lane and one right turn lane	E. Songsmith S		
Southbound Site Entrance B	Approach does not exist	Drive ——	One left turn lane and one right turn lane	Drive LTL = 75'		

Based on DelDOT's *Development Coordination Manual*, the recommended minimum storage lengths (excluding taper) of the eastbound left turn lane and westbound right turn lane are 75 feet and 100 feet, respectively. The calculated queue lengths from the HCS analysis can be accommodated within the recommended storage lengths.

5. The developer should construct an unsignalized rights-out only Site Entrance C on E. Songsmith Drive, approximately 350 feet east of the intersection with Delaware Route 7. The intersection should be consistent with the lane configurations shown in the table below.

Approach	Curre	nt Configuration	Proposed Configuration			
Eastbound E. Songsmith Drive	One through lane	1	No change	ance C		
Westbound E. Songsmith Drive	One through lane	N E. Songsmith	No change	tte Entra		
Southbound Site Entrance C	Approach does not exist	Drive	One right turn lane	E. Songsmith On Drive		

6. The developer should construct an unsignalized rights-in only Site Entrance D on Delaware Route 7, approximately 450 feet north of the intersection with E. Songsmith Drive. The intersection should be consistent with the lane configurations shown in the table below.

Approach	Curren	t Configuration	Proposed Configuration		
Westbound Site Entrance D	Approach does not exist	Delaware Route 7	One receiving lane	Delaware Route 7 N V	
Northbound Delaware Route 7	Two through lanes	↑ ↑	Two through lanes and one right turn lane	RTL = 290'	

Based on DelDOT's *Development Coordination Manual*, the recommended minimum storage length (excluding taper) of the northbound right turn lane is 290 feet. The calculated queue lengths from the HCS analysis can be accommodated within the recommended storage lengths.

- 7. The developer should make an equitable contribution to the proposed improvements at the intersection of Delaware Route 7 and US Route 40 as proposed as part of the *US 40 and SR 7 Intersection Improvements* project (DelDOT Contract No. T202304101). At DelDOT's discretion, the developer may contribute to the Traffic Signal Revolving Fund in lieu of the agreement. The Traffic Signal Revolving Fund contribution is \$39,214.
- 8. The developer should make an equitable contribution to the proposed improvements proposed as part of the *SR 1 Widening, Road A to US 40* project (DelDOT Contract No. T202011001). The equitable contribution amount is \$816,000. The developer should coordinate with DelDOT's Subdivision Section on the equitable cost payment terms.
- 9. The following bicycle, pedestrian, and transit improvements should be included:
 - a. A minimum of fifteen-foot wide permanent easement from the edge of the right-of-way should be dedicated to DelDOT along the Delaware Route 7 and E. Songsmith Drive site frontages. Within the easement, the developer should construct a new 5-foot wide sidewalk with an angled termination into the shoulder where the shoulder/bike lane is at least five feet wide. The sidewalk should be designed to meet current AASHTO and ADA standards. A minimum five-foot setback should be maintained from the edge of the pavement to the sidewalk. The developer should coordinate with DelDOT's Development Coordination Section during the plan review process to identify the exact location of the sidewalk.
 - b. An internal connection from the SUP into the site is required.
 - c. ADA compliant curb ramps and marked crosswalks should be provided along the Site Entrance.

- d. The minimum five-foot wide bicycle lanes should be maintained in the right turn lane and shoulder along the Delaware Route 7 approach to the Site Entrance.
- e. Internal bicycle racks should be provided.
- f. Utility covers should be moved outside of any designated bicycle lanes and any proposed sidewalks or should be flush with the pavement.
- g. The existing DART bus stop along the Delaware Route 7 site frontage should be maintained and should continue to be ADA compliant.

Please note that this review generally focuses on capacity and level of service issues; additional safety, operational, and constructability issues will be further addressed through DelDOT's Plan Review process.

Improvements in this TOA may be considered "significant" under DelDOT's Work Zone Safety and Mobility Procedures and Guidelines. These guidelines are available on DelDOT's website at https://www.deldot.gov/Publications/manuals/de-mutcd/index.shtml.

Additional details on our review of the TOA are attached. Please contact me at (302) 266-9600 if you have any questions concerning this review.

Sincerely,

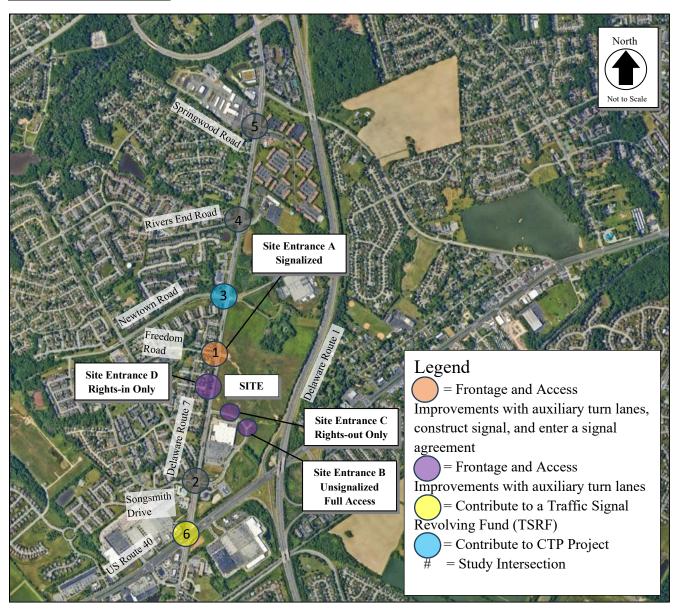

Johnson, Mirmiran, and Thompson, Inc.

Joanne M. Arellano, P.E., PTOE

Recommendations Map

General Information

Report date: Dated April 2022, Last revised September 2022

Prepared by: Landmark Science & Engineering **Prepared for:** Reybold Venture Group VII

Tax Parcel: 10-033.00-040

Generally consistent with DelDOT's Development Coordination Manual (DCM): Yes

Project Description and Background

Description: Reybold Venture Group VII seeks to develop a mixed-use development consisting of 508 units of mid-rise multi-family housing, a 230-room full-service hotel, a 10,000 square-foot daycare, 181,470 square feet of shopping center space, 10,000 square feet of high-turnover sit-down restaurant space, and 499,863 square feet of general office space.

Location: The land is located on the east side of Delaware Route 7, approximately 550 feet south of Newtown Road (New Castle Road 58).

Amount of Land to be developed: An approximately 56.05-acre parcel.

Land Use approval(s) needed: Entrance Plan.

Proposed completion date: 2022.

Proposed access locations: Two full access points are proposed on Delaware Route 7: one full access point opposite Freedom Road and another by way of a connection with E. Songsmith Drive.

Daily Traffic Volumes:

• 2021 Average Annual Daily Traffic on Delaware Route 7: 16,289

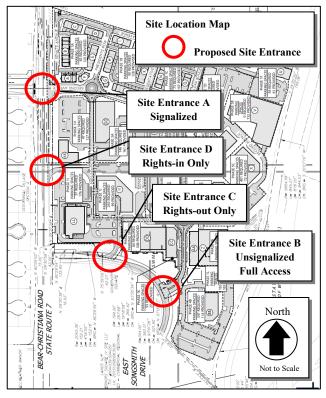

^{*}AADT is sourced from data provided by DelDOT Gateway.

Lincoln Center – September 2022 TOA

*Graphic is an approximation based on the Record Resubdivision Plan prepared by Foresite Associates, Inc. dated May 5, 2017, last revised September 17, 2019.

Lincoln Center – Updated Land Uses

*Graphic is an approximation based on the Phase 11 Exploratory Plan prepared by Foresite Associates, Inc. dated July 11, 2024.

Relevant and On-going Projects

DelDOT has relevant and on-going improvement projects within the study area. The *SR 1 Widening, Road A to US 40* (DelDOT Contract No. T202011001) project, which was originally part of the *SR1 Widening, SR273 to the Roth Bridge* project (DelDOT Contract No. T200511001), proposes to identify and prioritize cost-effective short, mid, and long-term transportation infrastructure improvements to reduce congestion, reduce travel times, and improve safety, all while minimizing environmental impacts. This project affects the Delaware Route 1 and Delaware Route 273 intersection as well as the Delaware Route 273 and Delaware Route 7 intersection, just north of the study area for the Lincoln Center TOA. This project is currently in the design and planning phase, with several public workshops already being held. At the January 2022 public workshop, a preferred alternative depicting a single point urban interchange (SPUI) at the Delaware Route 1 and Delaware Route 273 interchange was presented. Additionally, ramps from Delaware Route 1 are proposed to connect to the Delaware Route 7 and Newtown Road intersection. Construction dates have not yet been determined at this stage. More information regarding the project can be found at the following websites:

https://deldot.gov/projects/index.shtml?dc=details&projectNumber=T200511001;

https://deldot.gov/projects/index.shtml?dc=details&projectNumber=T202011001.

The Route 40 Corridor Improvements Project was initiated by the Delaware Department of Transportation in partnership with New Castle County and WILMAPCO in September 1998 and created the community-supported 20-year transportation plan previously known as the Route 40 Corridor 20-Year Transportation Plan. The Plan addresses the conditions that are expected to result from projected growth in housing, employment, and traffic over 20 years. The Plan contains projects that address the projected transportation problems. An annual Corridor Monitoring and Triggering Report is generated by DelDOT, WILMAPCO, New Castle County, and DART to determine the need for further evaluation of transportation, safety, and transit improvements based on land development, traffic, corridor preservation, highway safety, transit service, and projects in the area. More information regarding the study can be found at the following website: https://deldot.gov/projects/index.shtml?dc=corridor&name=us-40

The US Route 40 intersection with Delaware Route 7 is reviewed as part of the Corridor Monitoring associated with the *Route 40 Corridor Improvements Project*. As a result of the monitoring, DelDOT has developed the *US 40 and SR 7 Intersection Improvements* project (DelDOT Contract No. T202304101), which aims to improve safety and operations through geometric improvements, with a potential for a grade-separated interchange. Per the *FY25 - FY30 Capital Transportation Program Spend Plan*, Preliminary Engineering is scheduled as part of Fiscal Year 2025 through Fiscal Year 2029. Construction funding has not been established.

Livable Delaware

(Source: Delaware Strategies for State Policies and Spending, 2020)

Location with respect to the Strategies for State Policies and Spending Map of Delaware: The proposed development is located within Investment Levels 1 and 2.

Investment Level 1

These areas are often municipalities, towns, or urban/urbanizing places in counties where density is generally higher than in surrounding areas. In Investment Level 1 Areas, state investments and policies should support and encourage a wide range of uses and densities, promote a variety of transportation options, foster efficient use of existing public and private investments, and enhance community identity and integrity. Overall, it is the state's intent to use its spending and management tools to maintain and enhance community character, and to promote well-designed and efficient new growth in Investment Level 1 Areas. In Level 1 Areas, the state's first priority will be for preserving existing facilities and making safety improvements. Level 1 areas will also be the highest priority for context sensitive transportation system capacity enhancements, transit-system enhancements, ADA accessibility, and for closing gaps in the pedestrian system, including the Safe Routes to School projects. Investment Level 1 Areas are ideal locations for Transportation Improvement Districts as well as Complete Community Enterprise Districts. Further, Level 1 areas are the priority for planning projects and studies, bicycle facilities, signal-system enhancements, and the promotion of interconnectivity of neighborhoods and public facilities.

Investment Level 2

These areas can be composed of less developed areas within municipalities, rapidly growing areas in the counties that have or will have public water and wastewater services and utilities, areas that are generally adjacent to or near Investment Level 1 Areas, smaller towns and rural villages that should grow consistently with their historic character, and suburban areas with public water, wastewater, and utility services. They serve as transition areas between Level 1 and the state's more open, less populated areas. They generally contain a limited variety of housing types, predominantly detached single-family dwellings. In Investment Level 2 Areas, like Investment Level 1 Areas, state investments and policies should support and encourage a wide range of uses and densities, promote other transportation options, foster efficient use of existing public and private investments, and enhance community identity and integrity. Investments should encourage departure from the typical single-family-dwelling developments and promote a broader mix of housing types and commercial sites encouraging compact, mixed-use development where applicable. Overall, the State's intent is to use its spending and management tools to promote welldesigned development in these areas. Such development provides for a variety of housing types, user-friendly transportation systems, essential open spaces and recreational facilities, other public facilities, and services to promote a sense of community.

Level 2 Areas share similar priorities as with the Level 1 Areas where the aim remains to: make context sensitive transportation system capacity enhancements, preserve existing facilities, make safety enhancements, make transportation system capacity improvements, create transit system enhancements, ensure ADA accessibility, and close gaps in the pedestrian system, including the Safe Routes to School projects. Investment Level 2 Areas are ideal locations for Transportation Improvement Districts and Complete Community Enterprise Districts. Other priorities for Level 2 Areas include: Corridor Capacity Preservation, off-alignment multi-use paths, interconnectivity of neighborhoods and public facilities, and signal-system enhancements.

Proposed Development's Compatibility with Livable Delaware:

The proposed development is located within Investment Level 1 and Investment Level 2. Investment Levels 1 and 2 are the priority for job creation and retention. The proposed development consists of an office space, a restaurant, a hotel, a daycare, and shopping center space, which would create jobs. Therefore, the proposed development is generally consistent with the 2020 Delaware Strategies for State Policies and Spending.

Comprehensive Plan

(Source: New Castle County Comprehensive Plan, 2050)

New Castle County Comprehensive Plan:

Per the *New Castle County Comprehensive Plan Current Zoning Map*, the proposed development is zoned as Office Regional. Per the *New Castle County Comprehensive Plan Future Land Use Map 2022*, the proposed development is designated as a Type 1 – Commercial Corridor Development.

Proposed Development's Compatibility with the New Castle County Comprehensive Plan

The New Castle County Comprehensive Plan states that the future land use plan needs to provide adequate flexibility for vibrant economic activity bringing good jobs to the area as well as address

housing needs for New Castle County residents. Therefore, the proposed development is generally consistent with the *New Castle County Comprehensive Plan*.

Trip Generation

The trip generation for the development proposed within the TOA was determined by using the comparable land use and rates/equations contained in the *Trip Generation*, 10th Edition: An ITE Informational Report, published by the Institute of Transportation Engineers (ITE) for ITE Land Use Code 710 (General Office), ITE Land Use Code 932 (High-Turnover Sit-Down Restaurant), ITE Land Use Code 820 (Shopping Center), ITE Land Use Code 565 (Day Care Center), ITE Land Use Code 310 (Hotel), and ITE Land Use Code 221 (Multifamily Housing Mid-Rise). Trip generation was reviewed by DelDOT as part of the Preliminary TOA (PTOA) submission.

Table 1aLincoln Center Trip Generation – September 2022 TOA (ITE Trip Generation 10th Edition)

Land Use	ADT	We	Weekday AM Peak Hour			Weekday PM Peak Hour		
		In	Out	Total	In	Out	Total

Overview of TOA

Intersections examined:

- 1. Delaware Route 7 / Site Entrance A / Freedom Road
- 2. Delaware Route 7 / Songsmith Drive / E. Songsmith Drive / Site Entrance B
- 3. Delaware Route 7 / Newtown Road (New Castle Road 68) / Bank One
- 4. Delaware Route 7 / Rivers End Road / St. Elizabeth Ann Seton Roman Catholic Church
- 5. Delaware Route 7 / Springwood Road / Christiana Meadows
- 6. Delaware Route 7 / US Route 40

Conditions examined:

- 1. Case 1 2021 existing.
- 2. Case 2 2022 without development.
- 3. Case 3 2022 with development.

Committed Developments considered:

- 1. Governors Square Commercial (Unbuilt 96,936 square feet of retail)
- 2. Dasher Farm (48 single-family detached houses)

*Committed development information provided in the Final TOA supersedes the information provided by the April 1, 2022, DelDOT Scoping Meeting Memorandum.

Peak hours evaluated: Weekday AM and Weekday PM

Intersection Descriptions

1. Delaware Route 7 / Site Entrance A / Freedom Road

Type of Control: Existing two-way stop-controlled intersection (T-intersection) Proposed signalized intersection (four-legged).

Eastbound Approach: (Freedom Road) Existing one left turn lane and one right turn lane; proposed one shared left turn/through lane and one right turn lane.

Westbound Approach: (Site Entrance A) Existing one shared left turn/through/right turn lane. Proposed one shared left turn/through lane and one right turn lane.

Northbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one right turn lane.

Southbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one right turn lane.

2. Delaware Route 7 / Songsmith Drive / E. Songsmith Drive / Site Entrance B)

Type of Control: Existing signalized intersection (four-legged).

Eastbound Approach: (Songsmith Drive) Existing one left turn lane, one shared left turn/through lane, and one right turn lane.

Westbound Approach: (E. Songsmith Drive / Site Entrance B) Existing one left turn lane, one shared left turn/through lane, and one right turn lane.

Northbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one right turn lane.

Southbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one right turn lane.

3. Delaware Route 7 / Newtown Road (New Castle Road 68) / Bank One

Type of Control: Existing signalized intersection (four-legged).

Eastbound Approach: (Newtown Road) Existing one shared left turn/through lane and one channelized right turn lane, yield controlled.

Westbound Approach: (Bank One) Existing one shared left turn/through lane and one right turn lane.

Northbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one channelized right turn lane, yield controlled.

Southbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one channelized right turn lane, yield controlled.

4. Delaware Route 7 / Rivers End Road / St. Elizabeth Ann Seton Roman Catholic Church Type of Control: Existing signalized intersection (four-legged).

Eastbound Approach: (Rivers End Road) Existing one left turn lane, one shared left turn/through lane, and one channelized right turn lane, yield controlled.

Westbound Approach: (St. Elizabeth Ann Seton Roman Catholic Church) Existing one shared left turn/through lane and one right turn lane.

Northbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one channelized right turn lane, yield controlled.

Southbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one channelized right turn lane, yield controlled.

5. Delaware Route 7 / Springwood Road / Christiana Meadows

Type of Control: Existing signalized intersection (four-legged).

Eastbound Approach: (Springwood Road) Existing one shared left turn/through lane and one right turn lane.

Westbound Approach: (Christiana Meadows) Existing one shared left turn/through lane and one right turn lane.

Northbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one right turn lane.

Southbound Approach: (Delaware Route 7) Existing one left turn lane, two through lanes, and one channelized right turn lane, yield controlled.

6. Delaware Route 7 / US Route 40

Type of Control: Existing signalized intersection (four-legged).

Eastbound Approach: (US Route 40) Existing two left turn lanes, three through lanes, and one channelized right turn lane, yield controlled.

Westbound Approach: (US Route 40) Existing two left turn lanes, three through lanes, and one channelized right turn lane, yield controlled.

Northbound Approach: (Delaware Route 7) Existing one left turn lane, one through lane, and two right turn lanes.

Southbound Approach: (Delaware Route 7) Existing two left turn lanes, two through lanes, and one channelized right turn lane, yield controlled.

Transit, Pedestrian, and Bicycle Facilities

Existing transit service: Per DelDOT Gateway, there are three DART Routes that run through the project area, 40, 54, and 64. DART Route 40 runs along US Route 40, passing through the study area at the intersection of US Route 40 and Delaware Route 7. Route 40 provides 35 round trips from 4:35 AM to 11:50 PM on weekdays and 16 round trips from 6:19 AM to 11:20 PM on Saturdays. DART Route 54 runs along US Route 40, passing through the study area at the intersection of US Route 40 and Delaware Route 7. DART Route 54 also runs along Rivers End Road and Delaware Route 7, turning at the intersection of these two roads. Route 54 runs along Delaware Route 7 from Rivers End Road past Christiana Meadows / Springwood Road. Route 54 provides 22 round trips from 5:20 AM to 10:35 PM on weekdays and provides 9 round trips from 7:10 AM to 9:05 PM on Saturdays. DART Route 64 runs along Delaware Route 7 in the study area between Songsmith Drive and Christiana Meadows / Springwood Road and along US Route 40 at the intersection of US Route 40 and Delaware Route 7. Route 64 provides 21 round trips from 5:15 AM to 11:22 PM on weekdays and 16 round trips from 6:08 AM to 10:51 PM on Saturdays.

Planned transit service: Per email correspondence on October 7, 2022, with Mr. Jared Kauffman, Fixed-Route Planner for DART, the Delaware Transit Corporation requested that the existing stop on Delaware Route 7 (ID 2562) should still be constructed to ADA standard.

Existing bicycle and pedestrian facilities: According to DelDOT's New Castle County Delaware Bicycle Map, several study roadways are considered bicycle routes. Delaware Route 7 is considered a regional bicycle route. US Route 40 is considered a connector bicycle route. Newtown Road has an adjacent off-road bicycle trail that runs from Delaware Route 7 to Smalleys Dam Road.

Planned bicycle and pedestrian facilities: Email correspondence was sent on September 26, 2022 to Mr. Anthony Aglio, DelDOT's Bicycle and Pedestrian Coordinator and on November 1, 2022, to Mr. John Fiori, DelDOT's Bicycle Coordinator, and Ms. Linda Osiecki, DelDOT's Pedestrian Coordinator. A response was not received.

Bicycle Level of Traffic Stress in Delaware: Researchers with the Mineta Transportation Institute developed a framework to measure low-stress connectivity, which can be used to evaluate and guide bicycle network planning. Bicycle LTS analysis uses factors such as the speed of traffic, volume of traffic, and the number of lanes to rate each roadway segment on a scale of 1 to 4, where 1 is a low-stress place to ride and 4 is a high-stress place to ride. It analyzes the total connectivity of a network to evaluate how many destinations can be accessed using low-stress routes. Developed by planners at the Delaware Department of Transportation (DelDOT), the bicycle Level of Traffic Stress (LTS) model will be applied to bicycle system planning and evaluation throughout the state. The Bicycle LTS for the roadways under existing conditions along the site frontage are summarized below. The Bicycle LTS was determined from the DelDOT Gateway.

• Delaware Route 7 LTS: 3-4

Signal Warrant Evaluation

The TOA conducted a Signal Warrant Analysis dated July 2012 at the Delaware Route 7 and Freedom Road intersection. The evaluation was conducted using traffic volume data and geometric conditions in accordance with the Delaware Manual on Uniform Traffic Control Devices, 2011 Edition (DE MUTCD). As the study intersection has a posted speed limit of 45 mph along Delaware Route 7, the DE MUTCD's reduced volume criteria was applied. Based on the evaluation from the TOA, volumes warrant 1, 2, and 3 are met. The crash warrant (based on both the MUTCD and the IA-19.3 - Alternative Signal Warrant 7) was deemed to have not been met. Additionally, warrants 6 and 8 were deemed to have been met by the TOA. The remaining warrants were not met. There is not a significant difference between the volumes in the Signal Warrant Analysis performed in 2012 and those from Case 3 in the TOA; as such, the signal is warranted at the Delaware Route 7 and Freedom Road intersection.

Crash Evaluation

Crash data was not provided by the TOA.

Previous Comments

Comments from the PTOA were not addressed in the Final TOA. JMT utilized updated Case 2 and Case 3 volumes.

Sight Distance Evaluation

No sight distance constraints were noted at the future site entrance location per a field visit conducted on October 21, 2022.

General HCS Analysis Comments

(See table footnotes on the following pages for specific comments)

- 1) The TOA used version 2022 of HCS, whereas JMT used version 7.9.6 of HCS7 to complete the analysis.
- 2) Per DelDOT's *Development Coordination Manual*, JMT used a heavy vehicle percentage of 3% for each movement greater than 100 vph in the Case 2 and Case 3 future scenario analysis, unless the existing heavy vehicle percentage was greater than 3% and there was no significant increase of vehicles along that movement, in which case the existing heavy vehicle percentage was used for the analysis of future scenarios, whereas the TOA utilized the existing heavy vehicle percentage in all cases.
- 3) Per DelDOT's *Development Coordination Manual* and coordination with DelDOT Planning, JMT used a heavy vehicle percentage of 5% for each movement less than 100 vph along roadways in the analyses, whereas the TOA utilized the existing heavy vehicle percentage.
- 4) Per DelDOT's *Development Coordination Manual*, JMT utilized the existing PHF for the Case 1 scenario and a future PHF for Case 2 and 3 scenarios of 0.80 for roadways with less than 500 vph, 0.88 for roadways between 500 and 1,000 vph, and 0.92 for roadways with more than 1,000 vph or the existing PHF, whichever was higher. The TOA utilized the existing PHF for all cases.
- 5) Per DelDOT's *Development Coordination Manual*, JMT included coordinated signals in one HCS file for each case, while the TOA created separate analysis files for each intersection.
- 6) JMT utilized the revised volumes from the PTOA, whereas the TOA did not.
- 7) JMT included bicycles and pedestrians counted during the traffic data collection in the analysis, whereas the TOA did not.
- 8) Both JMT and the TOA modeled the signalized intersections with a saturation flow rate of 1,900 veh/hr/lane.
- 9) JMT incorporated right turn on red volumes in analysis, whereas the TOA did not.
- 10) For signalized analysis, JMT utilize cycle lengths consistent with the DelDOT signal timings for the intersections, whereas the TOA utilized various cycle lengths.
- 11) For signal optimization scenarios, JMT optimized green split times while maintaining the existing signal cycle lengths and offsets.
- 12) The TOA did not include analysis for Case 1 2021 Existing.
- 13) The HCS analysis results tables are based on the September 2022 TOA.

Table 2 Peak Hour Levels Of Service (LOS) Based on Final Traffic Operational Analysis for Lincoln Center Report Dated: September 2022

Prepared by: Landmark Science and Engineering

Unsignalized Intersection Two-Way Stop Control ¹	LOS per TOA		LOS per JMT	
Delaware Route 7 / Site Entrance A / Freedom Road	Weekday AM	Weekday PM	Weekday AM	Weekday PM
2021 Existing (Case 1)

³ JMT modeled the intersection with a 150 second cycle length per existing conditions, whereas the TOA modeled the intersection with a 120 second cycle length.

⁴ JMT modeled the intersection with one shared left turn/through lane, one through lane, and two right turn lanes along the northbound approach per existing conditions, whereas the TOA modeled the approach with one left turn lane, one through lane, and two right turn lanes. Additionally, JMT modeled the intersection with split phasing along the northbound and southbound approaches, whereas the TOA modeled the approaches with concurrent phasing and protected-only left turns.

⁵ JMT modeled the intersection with two left turn lanes along the eastbound US Route 40 approach per existing conditions, whereas the TOA modeled the approach with one left turn lane.

⁶ JMT modeled the intersection with yellow, red, and passage times per the DelDOT signal timing plans, whereas the TOA did not.
