Presentation Outline

• Delaware’s Strategic Highway Safety Plan – Pedestrian Emphasis Area

• Statewide Pedestrian Crash Statistics

• Statewide Pedestrian Safety Initiatives

• Pedestrian Safety Countermeasures in Action
  • Focus on RRFBs
    • Dewey Beach Area Pedestrian Safety Improvements
    • Bethany Area Pedestrian Safety Improvements
    • Before and After RRFB Data
    • RRFB Evaluation and Design Considerations
  • Focus on Pedestrian Hybrid Beacons (HAWKs)
    • Lewes/Rehoboth Beach Area Pedestrian Safety Improvements
    • HAWK Compliance Study Results and Next Steps

• Strategies and Actions for Improving Pedestrian Safety
2021-2025

Delaware Strategic Highway Safety Plan
What is an SHSP?

• Comprehensive, multi-year, **data driven** transportation safety plan with a goal of reducing highway fatalities and serious injuries on all public roads

• Establishes consistent statewide goals, objectives, emphasis areas, priorities, and countermeasures with stakeholders and other transportation plans

• Makes effective use of crash data to determines priorities

• Addresses **4 E’s of Highway Safety**
  • Engineering
  • Education
  • Enforcement
  • Emergency Medical Services
Delaware Strategic Highway Safety Plan

2021-2025
Strategic Highway Safety Plan:
Toward Zero Deaths

GOAL
The Delaware Strategic Highway Safety Plan: Towards Zero Deaths aims to eliminate fatalities and serious injuries on Delaware's roadways through a multi-agency approach that utilizes education, enforcement, engineering and emergency medical service strategies.

OVERALL OBJECTIVE
Delaware's 2021-2025 SHSP objective is to reduce fatalities and serious injuries by 15% over the next five years to ultimately reach the goal of zero fatalities and serious injuries on Delaware’s roadways.
2021-2025 SHSP Emphasis Areas

- Intersection: 39.4%
- Distracted Driving: 19.1%
- Impaired Driving: 18.7%
- Roadway Departure: 13.4%
- Pedestrians: 12.5%
- Motorcycles: 12.5%
- Unrestrained Motorists: 11.5%
- Heavy Vehicles: 9.5%
- Older Drivers/Pedestrians: 9.4%
- Speeding: 7.4%
- Young Drivers: 5.7%
- Bicyclists: 3.0%
- Fatigued Driving: 1.9%
- Work Zones: 0.8%
- Trains: 0.0%

REDUCE Pedestrian Fatalities & Serious Injuries by 15% from 76 to 64, over the next 5 years.

2021-2025 SHSP: deldot.gov/Programs/DSHSP/
Statewide Pedestrian Crash Statistics

• Jan. 16, 2016 – Dec. 31, 2020
• Source: DelDOT’s CARS Program
• All crash severities
  • Property Damage Only
  • Injury
  • Fatal
• Overall crash statistics
  • 1,721 pedestrian crashes
  • 1,796 pedestrians involved
  • 142 pedestrians killed
  • 221 pedestrians seriously injured
  • 759 pedestrians with minor injuries
  • 420 pedestrians with possible injuries
Statewide Pedestrian Crash Statistics

Statewide, pedestrian crashes accounted for 1.3% of all crashes and 24% of all fatalities from 2016 through 2020

35% of pedestrian fatalities occurred in November, December and January.
Statewide Pedestrian Safety Initiatives
Statewide Pedestrian Safety Initiatives

• Pedestrian Safety Audits
  • Better understand specific pedestrian crash trends
  • Multidisciplinary audit team to review corridors and make recommendations
  • Improvements are implemented as part of existing or future projects and programs
  • Since 2015, DelDOT has completed 10 audits/assessments and implemented various improvements
    • US 13 from Llangollen Boulevard to A Street
    • SR 273 from US 13 to SR 72
    • Kirkwood Highway from St. James Church Road to SR 141
    • US 13 Dover from Scarborough Road to Puncheon Run Connector
    • SR 1 from Lewes to Dewey Beach
    • US 202
    • SR 48 from SR 141 to DuPont Road
Statewide Pedestrian Safety Initiatives

Typical Pedestrian Safety Countermeasures:

- Painted crosswalks at signalized intersections
- Pedestrian signalization
- Marked crosswalks at appropriate mid-block crossing locations
- Active/enhanced pedestrian crossing systems (i.e., RRFBs)
- Corner sight distance improvements
- Curb bump outs to decrease crossing distances
- Median refuge areas
- Audible pedestrian signals
- Transit improvements
- Sidewalk connectivity improvements
- Traffic calming
- Improved warning signage
- Barriers to prevent undesired mid-block crossings
Statewide Pedestrian Safety Initiatives

• Advisory Council on Walkability and Pedestrian Awareness (Pedestrian Council)
  • Established October 12, 2015, by Governor Markell
  • Appointed membership included state agencies, planning councils, advocacy groups and the public
  • Areas of focus
    • Identifying gaps in the system of pedestrian paths and sidewalks
    • Provide advice regarding design standards for crosswalks, sidewalks, and pathways ensuring ADA compliance
    • Provide advice regarding implementation of DelDOT’s Sidewalk and Multi-Use Path Maintenance Policy
    • Review traffic rules to help support a safe pedestrian environment
    • Provide advice regarding accessibility and connectivity in an effort to make transit a more viable option
    • Developing strategies for pedestrian safety education and awareness
  • Subcommittees
    • Built Environment
    • Legislative
    • Education and Enforcement

Pedestrian Council website: https://deldot.gov/Programs/pedestrian_council/index.shtml
Statewide Pedestrian Safety Initiatives

• Pedestrian Education Countermeasures
  • Managed by Delaware Office of Highway Safety
  • Continued education outreach campaigns
    • Targeted media outreach
• Community outreach
  • Alliance Sports Marketing
    • Cross Country Races
    • Elementary school programs
  • Corporate/Public Partner Program
  • OHS Safety Conference
  • Banners for schools
  • Beach events: Partnership with Ocean City Pedestrian Task Force
  • Pedestrian Speed Demo
Pedestrian Safety Countermeasures in Action – RRFBs in Dewey Beach and Bethany Area

2021-2025 SHSP: deldot.gov/Programs/DSHSP/
Pedestrian Safety Countermeasures - RRFBs

• Rectangular Rapid Flashing Beacon
  • Pedestrian-actuated warning device used at uncontrolled, marked crosswalks
  • Intended to improve compliance with motorists yielding to pedestrians in marked crosswalks
  • First installation in April 2016
  • 43 locations completed since 2016
  • 3 currently under construction
  • 12 planned for future construction
  • 25% average improvement in motorist yielding compliance across all sites
Pedestrian Safety Countermeasures - RRFBs

• Rectangular Rapid Flashing Beacons – How do they Operate?
Dewey Beach Area Improvements

- 2018/2019 ➔ Design and Construction of SR 1 Pave and Rehab Project between Rehoboth Canal and Dewey Beach
- Coordination with legislators and various sections within DelDOT to install RRFBs at 3 existing uncontrolled crosswalks and establish 2 new uncontrolled crosswalks with RRFBs
- Known locally as “Forgotten Mile” – lined with motels but quieter than heavily commercial/retail areas in Dewey Beach and Rehoboth Beach
Dewey Beach Area Improvements

RRFB Locations – SR 1, Rehoboth Canal to Dewey Beach

🌟 RRFB at Existing Crosswalk (3)

- SR 1 @ Ann Ave
- SR 1 @ Old Bay Rd

🌟 RRFB at New Crosswalk (2)
- SR 1 @ F Benson St
- SR 1 @ Josephine St

🔴 Existing Signalized Crosswalk (2)
- SR 1 @ Bayard Ave
- SR 1 @ Spring Lake Dr

Image credit: DelDOT
2019 → Dewey Beach ADA Assessment

- ADA assessment conducted through DelDOT’s PAR program
- Included two conceptual alternatives that were used to establish a capital project:
  
  - **Short-Term Alternative**: isolated sidewalk widening, curb line adjustments and utility relocations to eliminate ADA pinch-points
  
  - **Long-Term Alternative**: implement short-term solutions above and include curb bumpouts to provide more room for pedestrians at critical crossing locations
Dewey Beach Area Improvements

2019/2020 → Dewey Beach Pave and Rehab → TIME TO ACT FAST!!!

- DelDOT and Town of Dewey = emergency coordination
- GOAL: implement as many long-term solutions as possible within scope of upcoming pave and rehab project to
- QUIT KICKING THE CAN DOWN THE CURB!!
- Obtained FHWA approval to add the Dewey Beach Pave and Rehab location to the existing “Forgotten Mile” contract
  - Eliminated bid/award/pre-construction process
  - Eliminated contractor mobilization costs and streamlined workflow
  - Quasi-design-build process with contractors, engineers, DelDOT and the Town
Curb Bumpouts:

- 31 total at 11 intersections
- Reduces pedestrian crossing distances
- Promotes traffic calming and reduces turning speeds
- Eliminates non-compliant pinch points (i.e., utility pole in narrow sidewalk)
- Provides more area for pedestrians at critical crossing areas/conflict points
Dewey Beach Area Improvements

- SR 1 @ New Orleans St
- SR 1 @ Swedes St
- SR 1 @ Clayton St
- SR 1 @ St. Louis St

📍 Existing Signalized Crosswalk (6)
Pedestrian Upgrades at Traffic Signals:

- New painted crosswalks on side streets
- New ADA-compliant pedestrian signals located at level landing areas
- Reconstruction of non-compliant curb ramps
- Removal of outdated/non-compliant infrastructure (i.e., non-countdown pedestrian signal heads)
Dewey Beach Area Improvements

Pedestrian Upgrades at Traffic Signals
Dewey Beach Area Improvements

Pedestrian Upgrades at Traffic Signals
Dewey Beach Area Improvements

• Two-stage left-turn bike boxes
  • Delaware’s first ever application
  • FHWA interim approval issued 2017
  • Allows cyclists to safely make a left turn from the right shoulder/bike lane without having to merge across through lanes and into a left-turn lane
  • Includes specialized in-pavement loop detectors for passive bicycle detection to call the side street phase
Left Turn Bike Box Design & Implementation Considerations:

- Agency must request and receive written approval from FHWA for use
- 3’x10’ recommended minimum size
- Right turns on red shall be prohibited for side street traffic
- Shall contain passive bicycle detection if vehicular approach is actuated
- Green colored pavement and guide signing is optional (regulatory signing required if use is mandatory)
- Position to avoid conflicts with adjacent crosswalks and bicycle lane
Bike Boxes - Additional Info:

- FHWA Interim Approval 20 (IA-20) for the Optional Use of Two-Stage Bicycle Turn Boxes: [https://mutcd.fhwa.dot.gov/res-interim_approvals.htm](https://mutcd.fhwa.dot.gov/res-interim_approvals.htm)
Dewey Beach Area Improvements

“D” Loop Bicycle Detector developed by CalTrans
“Green” Stormwater Management Improvements:

- Inter-agency coordination with Delaware Center for Inland Bays to include a pilot bio-retention area to reduce storm runoff into the Rehoboth Bay.
“Green” Stormwater Management Improvements:

- Installation of permeable concrete pavement along select areas of shoulder with historical drainage concerns
- Vacuum truck is used to clean sand and other debris to maintain porosity
Dewey Beach Area Improvements

Next Up for Dewey Beach – Median Pedestrian Barrier Coming this Fall/Winter

- Intended to “funnel” pedestrians to crosswalks and deter mid-block crossings
- Nautical post-and-rope theme
- Removal of existing concrete and new low-level landscaping and mulch
- Installation of 3 twin arm light poles in the SR 1 median from Houston Street to Bayard Ave
- Town Agreement → Town to own and maintain barrier system, landscaping, and additional lighting
Dewey Beach Area Improvements

“Pilot” Median Barrier Project Limits – Saulsbury Street to Read Avenue

- Funded by DelDOT Traffic with Town and local legislator contributions
- Limits based on historical pedestrian / bicycle crash clusters and adjacent land use
- ~1,500 linear feet
- Future capital or town project could extend barrier system
"Pilot" Median Barrier Project

• Similar to Florida DOT developmental standard detail

• Utilizes wood posts with holes drilled perpendicular to the direction of travel for breakaway effect

• System is not crash tested, but individual wood posts are NCHRP 350 approved

• Pedestrian safety benefits outweigh rare potential for roadway departure crash (curb, low speeds, urban setting)
Dewey Beach Area Improvements

Ongoing Support for the Town of Dewey Beach:

• Lowering speed limit from 30 MPH to 25 MPH, justified by multi-modal safety

• Custom sidewalk stencils to educate and remind pedestrians to check both lanes of traffic (concerns with “multiple threat” scenarios)

• Town agreements to install in-roadway signage and advance “pedestrian crossing” pavement markings at uncontrolled crosswalks

• Educational message boards for motorists to yield at RRFBs

• Future multi-million $$ capital project (construction FY28)
Bethany Area Improvements

• June 2019 → Delaware State Police, Town of Bethany Beach and Town of South Bethany approached DelDOT

• DelDOT Traffic and Towns partnered on a 2-year, $2+ million pedestrian improvement program highlighted by continuous roadway lighting and 9 RRFB crossing systems
Bethany Area Improvements

6 New RRFBs constructed in 2020
(indicated by yellow pins)

3 New RRFBs in construction Spring 2021
(indicated by blue pins)

New Lighting System constructed in 2020
(indicated by green path)

2 New Lighting Systems in construction Spring 2021
(indicated by orange & pink paths)
Roadway Lighting:

- Twin arm decorative light standards in the median of SR 1
- Nearly 3 miles of continuous roadway lighting – 87 light poles total
- $1.56 million total
- 3 separate lighting systems:
  - Town of Bethany Beach
  - Town of South Bethany
  - DelDOT (Middlesex Beach/Sea Colony unincorporated area)
Bethany Area Improvements

Roadway Lighting: Town Agreements and Cost Sharing

• DelDOT funded design and construction, the Towns assumed ownership and maintenance

• Towns provided additional funding for decorative light poles
Bethany Area Improvements

Town of Bethany Beach – Striping Improvements

• No sidewalks along SR 1 → shoulder serves as defacto pedestrian access route and bike lane
• Installed pedestrian and bicycle markings along the SR 1 shoulders to delineate proper areas/directions of travel, educate road users and enhance the conspicuity of pedestrian crossings and conflict areas
Bethany Area Improvements

RRFB Improvements – Bethany Beach

- 3 new RRFBs installed
  - Wellington Parkway
  - Central Boulevard
  - Oceanview Parkway

- Bethany Beach provided construction funding for one location

- Selected locations based on land use and pedestrian desire lines
RRFB Improvements – Bethany Beach

- Roadside constraints required “stealing” existing pavement and shifting crosswalk locations to provide ADA compliant landing areas
Bethany Area Improvements

RRFB Improvements – Bethany Beach
Bethany Area Improvements

RRFB Improvements – Bethany Beach
Bethany Area Improvements

RRFB Improvements – Bethany Beach
Bethany Area Improvements

RRFB Improvements – Middlesex Beach / Sea Colony

• 2 new RRFBs installed
  • Marketplace / Hickman Plaza
  • Bridge Road

• Locations based on crash data and coordination with Middlesex Beach Association

• Additional RRFBs being considered in Middlesex Beach area for FY22-23
Bethany Area Improvements

RRFB Improvements – South Bethany

• 4 new RRFBs installed
  • Anchorage Drive
  • Petherton Drive
  • Henlopen Drive
  • Bayshore Drive

• Locations based on land use and pedestrian desire lines
• Locations coordinated with DelDOT Planning and new bicycle parking racks

RRFB Before/After Data – Conclusions:

- RRFBs have been generally well received by the communities.
- Data is positive and verifies improvement in driver yielding compliance.
- Average pedestrian delay has been cut in half.
- Significant improvement in % of yield crossings vs. gap crossings.
- Dewey Beach and Bethany Area RRFBs generally align with statewide yielding rates.
- Rehoboth Canal to Dewey Beach area underperformed in first vehicle yielding rate, but saw significant improvement in average not yielding (14 to 4) and % of yield crossings (8% to 46%).
Pedestrian Crossing Evaluation and Study Process - Field Evaluation:

- Yielding compliance and pedestrian delay calculations (typically 25 readings for each crossing direction - see next slide for example)

- Vehicular speed studies for each main street approach (typically 50 readings per direction)

- Spot counts for ped/bike crossing volumes and main street vehicular volumes

- Sight distance evaluation

- Evaluate feasibility for geometric improvements (e.g., refuge islands, curb bumpouts) to reduce crossing distance and conflict points

- ADA design considerations (e.g., level landing areas, pole base locations, pushbutton oriented parallel with crosswalk, 18” turning space extension, pedestrian network, etc.)

- Power availability – hard-wired vs. solar-powered

- Utility and/or right-of-way constraints
Example “Staged” Crossing Study for Vehicle Yielding Compliance and Pedestrian Delay

Procedure:
- Requires 2 people – 1 “pedestrian” and 1 recorder/stopwatch operator
- The “pedestrian” should wear inconspicuous clothing (i.e., no vests/PPE) to appear as a civilian
- The “pedestrian” steps up to the edge of curb when a platoon of vehicles in the near-side lane is approaching the stopping sight distance for the posted speed
- The recorder begins the stopwatch when the pedestrian steps to the curb and stops once a near-side vehicle yields or there is a sufficient gap to cross.
- Record the number of vehicles that did not yield, whether the crossing was made due to a gap or yield, and the seconds of pedestrian delay
- If no vehicles are present in the opposing lane, leave the columns under the opposite direction of travel blank → “single stage crossing”
- If nearside vehicles yield but traffic is approaching in the far lane, the recorder shall “lap” the stopwatch and record the same data for the opposite direction of travel → “two stage crossing”
Pedestrian Crossing Evaluation and Study Process - Office Evaluation:

- Crash data analysis → specific trends attributed to the crossing?
- NCHRP Report 562 Analysis for pedestrian crossing treatment recommendation
- Process data from field pedestrian crossing studies and speed studies
- Archive plan research for existing utility and right-of-way information → identify any major impacts before proceeding with final design

**Key Data Inputs for NCHRP 562 Analysis:**
- Pedestrian crossing volumes
- Major road volumes
- Pedestrian crossing distance
- Pedestrian walking speed (3.5 ft/sec per MUTCD)
- Pedestrian start-up time = 3 sec per HCM
Typical Hardwired Power Feed / Cabinet Setup
RRFB Design Considerations

Example municipally-funded solar RRFB setups
RRFB Design Considerations

Cost Estimating for RRFB Systems:

- **Solar-powered assemblies**
  - ~ $8,000-$12,000 total per pole/flasher

- **Hardwired assemblies**
  - ~$6,000 per pole/flasher assembly
  - $25,000 - $35,000 total for simple single stage crossing with 2 pole/flasher assemblies including underground infrastructure and minor ADA upgrades
  - $45,000 - $65,000 for 2-stage crossings with 3-4 pole/flasher assemblies including underground infrastructure and minor ADA upgrades
Outside-the-Box RRFB Accommodations – Advance Bicycle/Pedestrian Detection

- Camp Arrowhead Road near Long Neck, DE
- Overhead mast-arm RRFB signs/flashers
- Fisheye video detection mounted to mast arm will detect trail users as they approach the crossing and automatically activate manual pushbutton
Outside-the-Box RRFB Accommodations – Advance Flashers for Poor Sight Distance

- Developer-funded trail crossing on Camp Arrowhead Road near Long Neck, DE
- Horizontal geometry limits sight distance for pedestrian crossing
- The pushbuttons at the crossing location will activate advance “AHEAD” flashers to actively warn approaching motorists of pedestrian activity
RRFB Design Considerations

Interim / Low-Cost Alternative Countermeasures

• “Spin Alert” hazard warning device
• Not recognized by MUTCD as a traffic control device – limited experimental use in DE
• Pilot location study – Beaver Dam Rd at St. Georges Chapel near Lewes, DE
  • Immediately following installation, driver compliance improved from 0-9% to 33-64%
  • Six months later, compliance rates decreased to 16-26%, but still an improvement over pre-existing conditions
Pedestrian Safety Countermeasures in Action – Pedestrian Hybrid Beacons (HAWKs) in Lewes/Rehoboth Beach Area
Lewes and Rehoboth Beach Area Improvements

• SR 1 – Rehoboth Canal to North of US 9 (Five Points) Pedestrian Improvements
  • July 2013 → DelDOT and legislators formed the Route 1 Ped Safety Task Force to develop recommendations and form project scope
  • $7 million construction budget
  • Project completed spring 2016
Lewes and Rehoboth Beach Area Improvements

- SR 1 – Rehoboth Canal to North of US 9 (Five Points) Pedestrian Improvements
  - Project elements included:
    - 6 miles of continuous sidewalk along both sides of SR 1
    - 6 new signalized crossings of SR 1
    - 2 new HAWK beacons
    - Lighting Improvements
    - Bus/Bike/Right-Turn Lane Signing and Striping
    - Transit improvements

Lewes and Rehoboth Beach Area Improvements

SR 1 HAWK Signal Locations
Pedestrian Hybrid Beacons (HAWK) - SR 1 @ Rehoboth Avenue (SR 1 SB only)
DelDOT HAWK Pedestrian Signal Compliance Review

• SR 1 at Rehoboth Avenue:
  • Motorist Compliance down from 87% in 2016 to 59% in 2019
  • Pedestrians and bicyclists frequently activate HAWK, but cross before the HAWK signal activates. Subsequently, many non-complying vehicles observed when no pedestrians or bicyclists are present.
  • Total crashes have increased by 27% since installation.
  • Zero bike/ped crashes prior to installation; 1 pedestrian and 3 bicycle crashes since installation, although none attributable to the HAWK signal.
  • Westbound pedestrians less likely to wait for the HAWK signal to activate and cross properly after completing 3 previous stages of the crossing (4-stage crossing of SR 1 / SR 1A).

Lewes and Rehoboth Beach Area Improvements

Pedestrian Hybrid Beacon (HAWK) - SR 1 @ Holland Glade Road
Lewes and Rehoboth Beach Area Improvements

DelDOT HAWK Pedestrian Signal Compliance Review

- SR 1 at Holland Glade Road:
  - Motorist Compliance down from 97% in 2016 to 72% in 2019
  - Pedestrians and bicyclists frequently activate HAWK, but cross before the HAWK signal activates. Subsequently, many non-complying vehicles observed when no pedestrians or bicyclists are present
  - Motorists observed speeding up during flashing yellow to “beat the light”
  - Total crashes have increased from 29 to 62 since installation of the HAWK
  - Bicycle crashes increased from 1 to 8 since installation of the HAWK signal, including one involving a bicyclist being hit by a motorist that disregarded the signal and 3 other crashes attributed to the HAWK

SR 1 HAWKs – Examples of Non-Compliance and Confusion

Figure 6: Pre-Impact

Figure 6: Bicyclists failed to stop for the SR 1 and Holland Glade Road HAWK Signal

Bikes did not stop or slow down for the HAWK signal

Pedestrians still crossing in clearance interval
SR 1 HAWKs – Examples of Non-Compliance and Confusion

Figure 8: Examples of conflicts at SR 1 and Holland Glade Road HAWK Signal
Recommendations and Next Steps for SR 1 HAWK Signals:

• Recommended that HAWK signals no longer be installed at intersections in Delaware – does not apply to HAWK signals installed at mid-block locations.

• Recommended that HAWKS only be installed at locations that can accommodate a single-stage pedestrian crossing. HAWK signal should not be installed at locations with wide medians requiring a two-stage crossing.

• DelDOT will monitor studies related to and consider the use of passive detectors at HAWK signals, which can pre-activate signals, extend walk interval for slower pedestrians, and shorten walk intervals or cancel calls if pedestrians leave early.

• Removal of the HAWK signals and replacement with traditional full color traffic signals are proposed for both SR 1 Rehoboth Beach area locations.
Strategies & Actions for Improving Pedestrian Safety
Strategies & Actions for Improving Pedestrian Safety

• Strategy 1: Develop and distribute consistent public information messages to educate the public about pedestrian safety
  • Increase targeted public outreach, based on specific data-driven trends
  • Increase awareness regarding pedestrian infrastructure improvements and incorporate educational outreach in conjunction with implementation of pedestrian improvement projects
  • Develop and distribute targeted public information messages to increase public awareness regarding safety issues during vehicle breakdowns

• Strategy 2: Develop educational training programs to improve pedestrian safety awareness
  • Incorporate pedestrian (and other road user) laws and rules of the road into Drivers Education and Defensive Driving curricula
  • Develop an educational outreach program for school children targeting pedestrian safety issues
  • Develop and implement formal crossing guard certification requirements, similar to programs for flaggers in highway work zones
Strategies & Actions for Improving Pedestrian Safety

• **Strategy 3: Strengthen pedestrian safety laws and enforcement efforts**
  - Utilize a strategic law enforcement and social services approach to address substance abuse related to pedestrian crashes and behaviors
  - Conduct high-visibility enforcement campaigns targeting both pedestrians and drivers to promote pedestrian safety
  - Support expansion of legislation permitting the use of automated speed enforcement in Delaware
  - Evaluate the need for a “Pedestrian Safety Behavior Modification” class and require those charged with various pedestrian safety violations to participate in the class
Strategies & Actions for Improving Pedestrian Safety

• Strategy 4: Install effective engineering countermeasures to improve pedestrian safety
  • Continue conducting pedestrian safety audits at high-crash locations and critical corridors and incorporate pedestrian behavioral surveys into the audits
  • Install infrastructure improvements to reduce pedestrian exposure, the potential for pedestrian/vehicle conflicts, and increase pedestrian visibility
  • Perform before/after studies to evaluate and identify the most effective pedestrian safety treatments
  • Research, and where appropriate, implement innovative pedestrian detection at signalized intersections and at other locations along high-risk corridors where driver feedback can be provided via signs and signals
• Strategy 5: Develop policies and/or guidelines to support pedestrian safety measures
  • Consider revising DelDOT’s design policies and guidelines to promote design practices that reduce vehicular speeds and promote pedestrian safety
  • Revise DelDOT’s Development Coordination Manual to require additional pedestrian infrastructure improvements related to new developments
  • Evaluate the need for revisions to DelDOT’s Complete Streets policy and implementation plan
  • Initiate a Pedestrian Safety Stakeholder group with membership from appropriate state agencies, advocacy groups and the public to identify pedestrian safety and connectivity improvements, policy updates and improved collaboration between state and local agencies, consistent with the objectives of the 2021-2025 SHSP
• Strategy 6: Improve data collection of pedestrian crashes and monitor trends
  • Working with the Division of Substance Abuse and Mental Health (DSAMH), share data to link mental health issues and substance abuse with traffic and pedestrian travel patterns to improve education outreach to vulnerable populations
  • Correlate pedestrian crashes with population changes associated with summer resort seasons, holiday shopping and other times that increase pedestrian activity and if necessary, identify appropriate pedestrian safety countermeasures
  • Correlate pedestrian crashes to income levels and homeless populations in Delaware and if necessary, identify appropriate pedestrian safety countermeasures
  • Implement best practices for the use of the new pedestrian origin-destination data to capture improved data about pedestrian travel patterns and crashes

• Strategy 7: Improve emergency services and incident management to address pedestrian safety
  • Evaluate the expansion of DelDOT’s Motorist Assistance Patrol (MAP) to increase services along interstates, freeways, and expressways to reduce pedestrian exposure during vehicle breakdowns
2021 Roadway Management Conference
