1. Use this rail adjacent to a pedestrian access route.
2. Shop fabricate all components of the rail including cutting and drilling.
3. Blut all exposed threaded hardware to ensure nuts can not be removed.
4. Prior to galvanizing, shop drill guardrail posts that rail brackets will be attached to.
5. Place rail splices at rail support brackets, using the same bolt to attach the rail to the bracket, to secure the splice tube.
6. Only install rails to standard w-beam sections and at least one post away from the payment limits of the end treatment.
7. For type 2-3 guardrail, bolt railing to every other post or at a spacing of 6'-3".

NOTES:
