For 2011, The DelDOT Office of Aeronautics is reporting 5.13 miles of public roads serving the state’s airports. We maintain Airport data in GIS platform and shape files which were provided to HPMS coordinator.

Reported Average Annual Daily Traffic (AADT) numbers are based on airport operations and employment data. These figures include all general aviation uses, including pilots, passengers, and visitors.

The other relevant information on the airport mileage, lanes and AADT data meets the guidelines and requirements of the latest HPMS Manual.

The following link provides more information about Delaware’s airports: Delaware Airport Directory.
