Criteria for Significance Evaluation

1. Age: Sites providing information on early settlement, technology, commerce, industry, or lifeways are more significant.

2. Regional Interest: Sites which have impact on regional or local research problems are more significant.

3. National Interest: Sites which have impact on national or universal research problems are more significant.

4. Preservation: Sites containing well-preserved structural, faunal, floral, or skeletal remains are more significant.

5. Multi-function: Sites exhibiting a range of well-defined activity/functional loci are more significant.

6. Uniqueness: Sites containing rare or unique features (technological innovations, slave-related components) are more significant.

7. Previous Knowledge: Site types about which little is known are more significant and those which provide information on poorly understood social-historical contexts are more significant.

8. Public Significance: Sites which may easily be used in public education programs due to site contents and accessibility for public viewing are more significant.

9. Size and Density: Larger sites and those containing dense deposits of material culture and more significant.

10. Famous Events or Persons: Sites associated with a person or event of local, regional, or national interest are more significant.

11. Duration of Occupation: Sites exhibiting discrete temporal loci whether in the context of long-term or short-term occupations are more significant.
