

# Delaware Bicycle Facilities Master Plan

## Steps to Implement the Bicycle Facility Master Plan

### Update of DeIDOT Design Manual

-Revise the Design Manual to include updated bicycle facility design guidelines

### Project Development Process

-Include planning, design & construction for bike facilities in Capital Improvement Program projects as recommended in final DeIDOT Bicycle Facility Master Plan.

### Resurfacing, Restoring, Rehabilitation and Reconstruction Improvement Program (4R)

-Incorporate bicycle facility recommendations as part of routine practices, when possible.

*If funding becomes available to DeIDOT, stand-alone bicycle projects may be undertaken. A prioritization process will be used to identify the facilities for earliest implementation based on several factors including safety, proximity to schools, state strategies investment areas & proximity to bicycle supportive employers.*
