

DBE In The Spotlight

The Loren Group

The Loren Group is a steel construction firm who has been in business for 26 years, specializing in fabricated steel foundation piles for airports, bridges, skyscrapers, and railroads. The firm has contributed to recent projects such as the JFK Airport in New York City, Lafarge Cement Plant in Brooklyn, NY, and Port of Wilmington in Wilmington, DE.

Widely known as the largest nationwide producer of friction piles, The Loren Group has a wide spectrum of capabilities in steel fabrication including curtain wall, metal piling and pole installation, forms for poured concrete, and railroad counter weights. Additional steel fabrication projects utilizing on-site contractors include welding, ornamental metalwork installation, fire escape installation, decorative steel, and wrought ironwork installation.

The firm is capable of providing integrated steel services including CNC burning, precision flattening, bending, blasting services, and engineering services. The firm specializes in the distribution of pole fabrication with up to a 40" diameter and 36' long, accommodating longer lengths with splicing. In addition, The Loren Group is capable of a wide range of structural shape rolling including angle beam, square/rectangular tube, channel, and heavy bar.

With a dedicated management team, The Loren Group stays on the cutting edge of new equipment and software while staying true to their roots with a good old-fashioned relationship with their customers.

"We say what we mean, and mean what we say."
