

Bridge 2-101B On Pearsons Corner Rd over Fork Branch

What?

This project involves the rehabilitation of Bridge 2-101B on Pearsons Corner Road over Fork Branch, located between Rose Dale Lane and Kenton Road.

The channel banks beyond the culvert will be armored with concrete blocks and crushed stone as a countermeasure against future erosion. And in order to protect the culvert's structural frame from scour, the channel bottom within the culvert will also be armored with concrete blocks. Finally, any concrete that is deteriorated will be repaired. At least one lane of traffic will be maintained on Pearsons Corner Road at all times during construction.

Where?

Bridge 2-101B
On Pearsons Corner Rd
over Fork Branch

Why?

This culvert has historically been subject to scour of the stream channel and to erosion of the adjacent channel banks. In order to prevent against these from progressing further, scour and erosion countermeasures will be put in place.

When?

Construction Start: Summer 2025
Construction End: Summer 2025
